

THANK YOU

Dear Mike,

Using your chemical line is the smartest decision I have made in my business. I have tried several other chemical lines and have found that other pre-spotters either did not work well on certain spots or were not half as concentrated as your PowRPak.

Here are the three main benefits I've gotten from using PowRPak over the past three years:

1. I only use one prespotter on all types of carpet and upholstery. This makes cleaning more convenient and less costly. We carry less chemicals on our vans as a result of this.
2. PowRPak is the best spotter I have found on urine, coffee, and most drink spills. The acid based element makes some spots disappear even before I clean the spot. The first cleaning that I tried PowRPak on was on a urine spot that I had previously been unsuccessful at removing. The Chemspec product I first tried failed in removal and the spot kept returning. After I received your sample, I prespotted with PowRPak, rinsed it out, and no more urine spots ever again.
3. Chances for re-soiling are drastically cut down due to the acid side cleaning.
4. PowRPak is not only a prespray but a natural deodorizing agent that counteracts urine, smoke, fish, mildew, and lots of other foul odors that are often present in carpet. I do lots of work for real estate move ins and outs. After cleaning urine soaked carpet, I've gotten compliments over and over again about how great the house smelled after we cleaned.

You can gladly use me for a reference for anyone that has questions about PowRPak. Email is usually the most convenient way to get in touch with me (Premiumgo@aol.com) PowRPak is hands down the best prespotter on the market.

Sincerely,

John Braun
